Source: Allianz Research

# Increased pessimism among exporters

## Turnover expectations

Source: Allianz Research

Since the war, pessimism has increased, with 22% of corporates expecting export turnover to decrease in 2022 against 6% pre-war. French and Italian exporters are most pessimistic, with 29% and 23% of them expecting a decrease in export turnover (against 3% pre-war)

## Breakdown of 2022 trade growth forecast revisions (pp)

Source: Allianz Research

Higher oil prices, the confidence and demand shock and extended supply-chain bottlenecks have led to sizeable revisions in global trade forecasts. We now expect global trade to grow by +4.0% in 2022 in volume terms (vs. +6.0% previously) and +10.9% in value terms (vs. +7.2% previously).

# Multiple risks on the rise since the war

How do you expect the following challenges to evolve in 2022 in relation to exporting?  
(share of exporters considering the risks to “become more of a challenge”)

Source: Allianz Research

Top 5 risks in 2022 for European exporters: energy (57%), geopolitical tensions (50%), increased transportation bottlenecks (49%), input costs and shortages (46%) and high funding costs (42%)

The cost or availability of inputs ranks among the top 3 risks for French exporters, who are also more worried about cyber attacks than higher funding costs or social unrest. Italian exporters are generally more worried overall.

# More than one third expect a significant profitability impact from higher energy prices

How do you expect energy prices to evolve in 2022 ?

Source: Allianz Research

Corporates in the UK and Italy are most worried about the impact of higher energy prices on profitability while a majority of French corporates expect a moderate impact.

Brent and TTF Gas

Source: Allianz Research

We expect oil prices to average 101 USD/bbl this year, but they could peak at over 150 USD/bbl in an adverse scenario.

# How much of the rise in commodity prices can corporates take?

Energy and non-energy materials bill increase that could wipe out all profits

NB: we only take into account sectors in which energy costs >5% opex  
 EMU6 = Germany, France, Italy, Spain, Netherlands, Belgium  
 Sources: Refinitiv, Allianz Research

NB: we only take into account sectors in which non-energy materials costs >5% opex  
 EMU6 = Germany, France, Italy, Spain, Netherlands, Belgium  
 Sources: Refinitiv, Allianz Research

# Top #2 risk: Geopolitical tensions

## Breakdown of 2022 GDP growth forecast revisions (pp)

Note: the supply-chains factor includes impacts from both the Russia-Ukraine crisis, and the Covid-19 outbreaks in China.

Source: Allianz Research

Two-thirds of the global growth revision is driven by confidence and supply chain shocks.

## VIX and Geopolitical Risk index

Sources: GPR Index, Refinitiv, Allianz Research

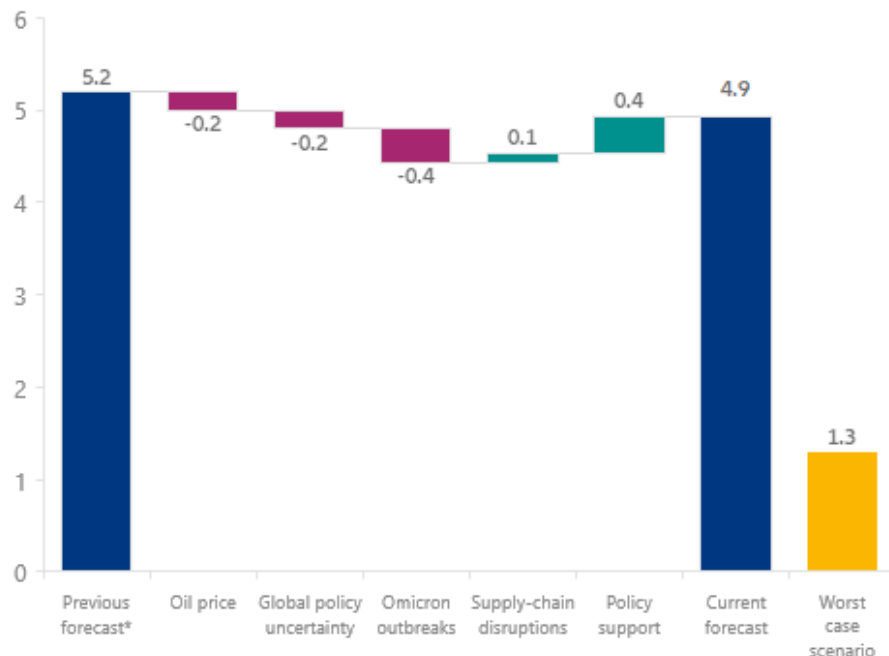

\*Geopolitical Risk Index, Federal Reserve

The rapid increase in geopolitical tensions led to an equity market risk repricing, pushing the VIX to values above 30pts.

# Omicron poses demand and logistics risks

## 2022 GDP growth forecast (%)

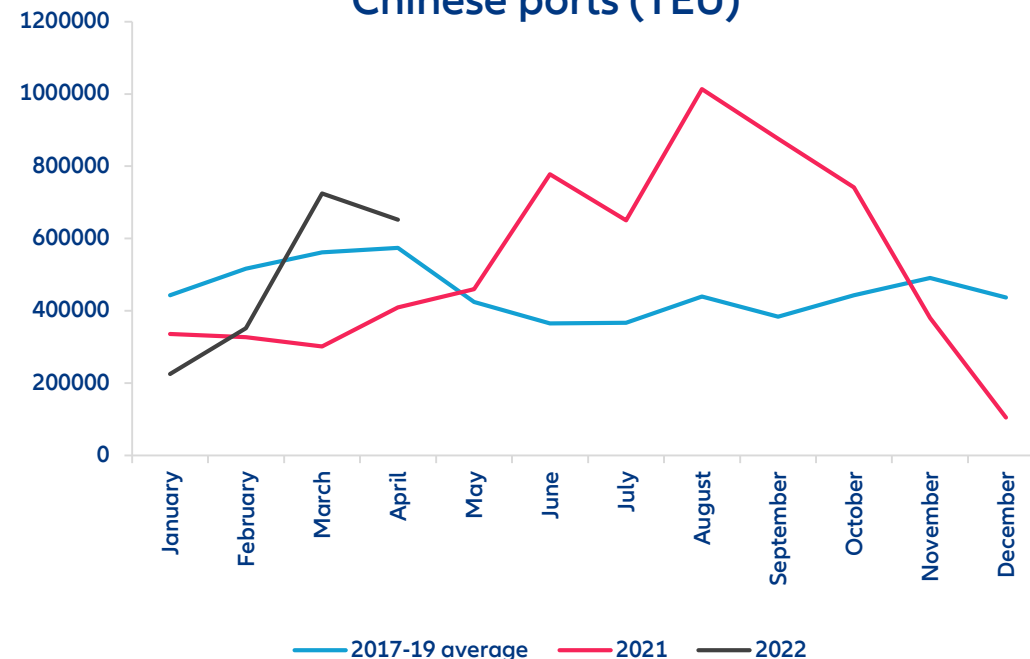

\* Before Ukraine war and Omicron outbreaks in China

Source: Allianz Research

Assuming that mobility at the national level in May 2022 returns to a range more in line with non-pandemic conditions, we find that omicron outbreaks year-to-date will have cost 0.4pp of GDP growth in 2022. In our central scenario, we expect China's GDP to grow by +4.9% in 2022. A repeat of 2020 would be the worst case.

## Total volume of container vessels anchored outside Chinese ports (TEU)

Sources: Refinitiv, Allianz Research

Covid-19 outbreaks are likely to lead to prolonged global supply-chain bottlenecks. The volume of container vessels anchored outside Chinese ports has been above normal in March and April 2022, with the monthly average surplus amounting to 2.2% of annual throughput.

# Top #3 risk: Transportation bottlenecks

## China port congestion and global delivery times

Sources: UNCTAD AIS database, IHS Markit, Allianz Research

The invasion of Ukraine is leading to bottlenecks in supply-chains at the (European) regional level, while Covid-19 outbreaks in China could have broader global repercussions. Suppliers' delivery times should remain relatively elevated for longer, but below the 2021 peaks.

## Oil prices (USD/bbl) and container freight prices (USD/FEU)

Sources: Bloomberg, Refinitiv, Allianz Research

Brent and container freight prices have exhibited a 90% correlation since 2020, suggesting a record-high peak of USD14,000/FEU for freight rates in Q2 (+40% from previous peak).

# Top #4 risk: Shortages or high input costs

Share of corporates considering shortages or costs of inputs to become more of a challenge in 2022

Source: Allianz Research

51% of corporates in Italy think shortages or the high cost of inputs will become more of a challenge in the coming months (compared to 24% pre-war), 47% in the UK and Germany (compared to 32% and 25% respectively) and 38% in France (compared to 26% pre-war). Corporates in household equipment, oil & gas, machinery & equipment, chemicals and ITC are most worried.

Proxy for demand-inventories mismatch

Sources: Markit, Allianz Research

Production shortfalls and depleting inventories hint towards a risk of a double-dip in global trade in H1 2022.

# Top #5 risk: Higher funding costs

Share of corporates considering higher funding costs to become more of a challenge in 2022

Source: Allianz Research

Expectations for a faster normalization of monetary policy have led corporates to expect a rise in funding costs, with 42% of them expecting higher funding costs to be a challenge in 2022. Corporates in the UK and Italy are most worried.

Total non-financial corporate deposits (vs. pre-Covid, EURbn)

Source: Allianz Research

French corporates held EUR206bn in excess cash post the Covid-19 crisis, the highest level among largest EU peers.

# Non-payment risk on the rise

Expectations for payment times in the next 6 to 12 months

Source: Allianz Research

The strongest upside revision of payment terms has been for exporters in Germany (+33pp to 66%) and the UK (+25pp to 47%) compared to +9pp for Italian exporters and stability for the French ones.

Expectations for defaults in the next 6 to 12 months

Source: Allianz Research

Expectations for rising insolvencies have been most revised on the upside by German and UK exporters, +28pp to 58% and +26pp to 53%, respectively, compared to +23pp for French ones and +20pp for Italian exporters.

# Global insolvencies, the East/West divide

Source: Allianz Research. Notes: Indices are the weighted sum of national indices, each country being weighted by the share of its GDP within the countries used in the sample. Forecasts as of March 23, without additional support measures and with Russian index stabilised at 2021 level.

Low level of insolvencies (-12% in 2021 at the global level). Global insolvencies expected to rise by +10% in 2022 but to remain -5% below pre-Covid levels end-2023. Adverse scenario to add potentially +5/10pp (2022) and +15/25pp (2023) at a global level.

# Business strategies in a black-out scenario

## Adapting business strategies in the event of intensifying or total trade embargos between Russia and Europe

Source: Allianz Research

47% of exporters will look for new energy suppliers (highest share in Italy), 41% for new suppliers for non-energy commodities (highest share in France) and 41% will increase selling prices (highest share in the UK).

## Share of respondents seeing government financing support as helpful for exports

Source: Allianz Research

The legacy of the Covid-19 era, state support is still viewed as the ultimate lifeline in crisis times, notably by French exporters.

# Mitigating export risks

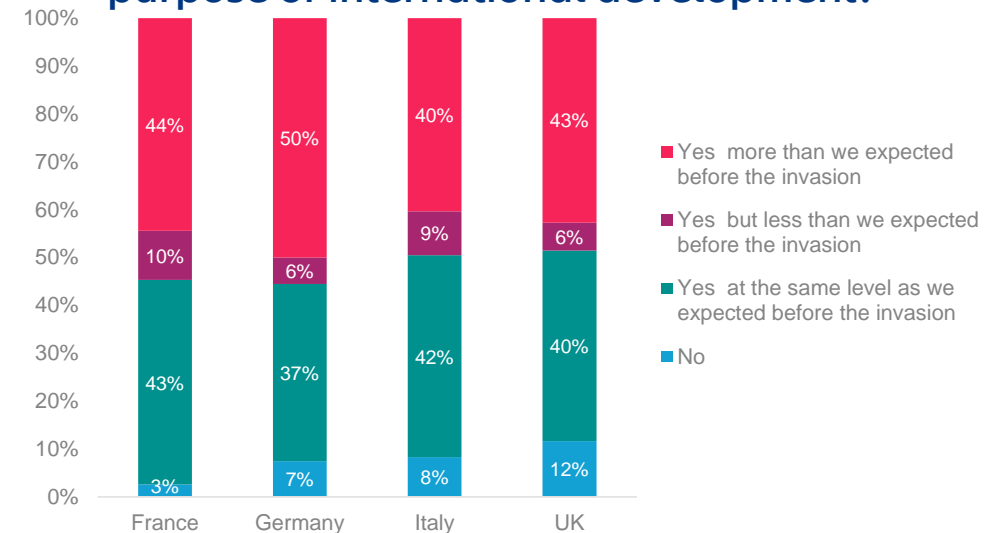

In which of the following ways - if any - are you adapting your exporting strategy due to the military escalation in Ukraine?

Source: Allianz Research

The top 3 export strategies to adapt after the Ukraine invasion are targeting new export markets (47%), with German exporters being most numerous in adapting this strategy (56%); finding new suppliers in the same proportion for all exporters in the four surveyed countries (44%) and finding new transportation services providers (38%), particularly among Italian exporters (41%).

In the context of the invasion of Ukraine by Russia, do you plan to seek investment in your business for the purpose of international development?

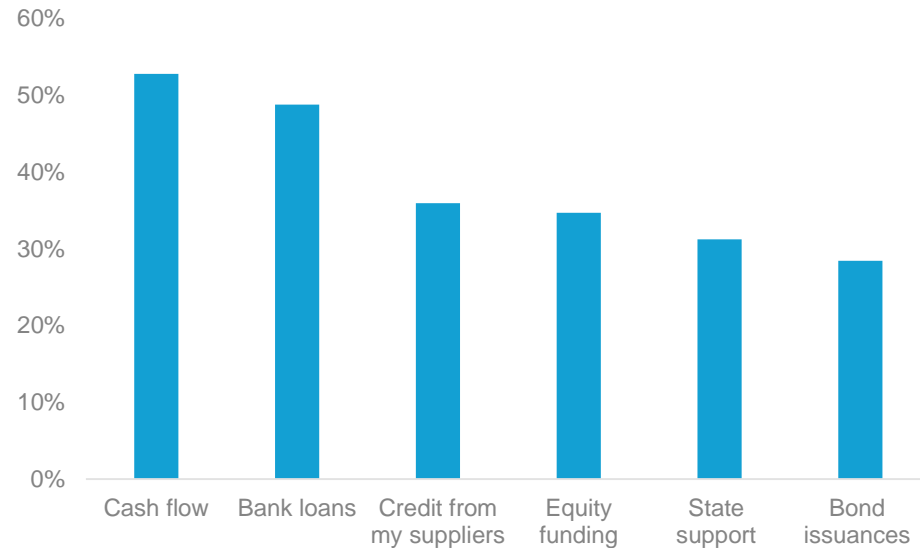

Source: Allianz Research

44% of exporters said they would seek more investment for international development than planned before the war, (50% among German exporters). Corporates in agrifood, ITC, retail and real estate are more numerous compared to the total average in seeking more investment.

# Cash flow remains top funding source

Which of the following sources of finance do you intend to use most in 2022?

Source: Allianz Research

Cash flow is the top source of financing for more than half of exporters, followed by bank loans and credit from suppliers. 51% of exporters think financing support in the forms of state-guaranteed loans and direct subsidies would help their business withstand the impact of the war. This compares to less than 40% pre-war. This is followed by new FTAs (47% and mainly from French and UK corporates) and lower regulation (44% and mainly from UK and Italian corporates).

In the context of the invasion of Ukraine by Russia, which of the following types of government support would support?

Source: Allianz Research

# Export strategy beyond the war

# Digitalization: A resilience tool

## Adaptation strategies to Covid-19

Source: Allianz Research

Covid-19 was a catalyst for digitalization as it was mentioned as the 2<sup>nd</sup> adaptation strategy by exporters. 43% of global firms stated they used digitalization to cope with the fallout of Covid-19.

## Digitalization in times of Covid-19 by country

Source: Allianz Research

A majority of Chinese firms declared that they digitalized their businesses during Covid-19, while just 36% of French firms or 33% of UK firms said the same.

# Digitalization: A means to different ends

Digitalization engagement

Source: Allianz Research

Digitalization is a strong trend, with almost all respondents stating that their organization engaged in it.

Top reason for digitalization efforts

	Top reason
France	Increase overall productivity
China	Improve the resilience of our supply chains
Germany	Reduce our costs
Italy	Increase overall productivity
UK	Increase overall productivity
US	Increase overall productivity

Source: Allianz Research

Interestingly, while respondents from most countries use digitalization to increase productivity, Chinese firms aimed at increasing the resilience of supply chains and German ones to reduce costs.

# ESG adaptation: “You go ahead”

## Top 3 ESG adaptation strategies

Source: Allianz Research

ESG adaptation is not yet the primary concern for firms. Most exporters state that they first adjust their relations with suppliers (before adjusting their own processes). Chinese firms seem to be more concerned by adapting to ESG than their global competitors.

# ESG: Carbon prices too low for now

Exporters planning to increase prices to compensate for carbon taxes

Source: Allianz Research

We find that only a small share of exporters plan to increase prices to compensate for carbon taxes, although a majority of Chinese firms declare so. This tends to underline that carbon prices are still too low to lead to a major change in global trade practices.

EU carbon price (EUR/ Mt)

Source: Refinitiv, Allianz Research

## ALLIANZ TRADE GLOBAL SURVEY – KEY MESSAGES

### More businesses are bracing for a hit to turnovers in 2022.

- In the 1st round of our survey, just 6% of companies were worried about turnover dropping in 2022; now, the share has risen to 22%, mostly in the chemicals, energy & utilities and machinery & equipment sectors.
- To cope with the ongoing slowdown in demand, companies are planning to diversify export markets and increase investments in new markets, proving that export ambitions remain resilient. But the longer the conflict lasts, the greater the risk of the slowdown escalating into a full-fledged demand shock, which could push global trade into a severe recession.

### State support is still viewed as the ultimate lifeline.

- A legacy of the Covid-19 era, state support is still viewed as the ultimate lifeline in crisis times. High energy prices, geopolitical tensions, increased transportation bottlenecks, sanctions against Russia and input shortages rank among the top concerns for companies.
- Around half of the companies we surveyed believe financing support via state-guaranteed loans and direct subsidies would protect their businesses from the fallout of the war.
- However, in the absence of a much more severe economic shock, we are unlikely to see the return of extensive “whatever it takes” policy support as seen during the Covid-19 crisis.

### Non-payment risk is back.

- More than 40% of exporters expect payment terms to increase following the war and more than half expect a rise in non-payment risk in the next six to 12 months, compared to less than one third before the war.
- This confirms the normalization in business insolvencies that had already begun before the war, albeit still at a moderate pace. For the main European export markets, we expect insolvencies to rise by more than +10% in 2022.
